**DETAILED ACTION**

***Priority***

1. Acknowledgment is made of applicant's claim for foreign priority based on an application filed in Russia on 02/21/2005. It is noted, however, that applicant has not filed a certified copy of the PCT/RU05/D000075 application as required by 35 U.S.C. 119(b).

***Claim Rejections - 35 USC § 101***

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-7 and 15-18 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims 16, 25 and 34 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims 1-7 and 15-18 recite a method of stable incremental layout of a hierarchical graph, which is representative of an abstract idea. The claimed method is not tied to another statutory class, e.g. product, process, article of manufacture, composition of matter, by which the method steps may be accomplished.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Aamodt et al., U.S. Patent Number 6,732,114 B1.

Regarding claim 1, Aamodt discloses a method of stable incremental layout of a hierarchical graph comprising: determining a level of the layout for each new node of the graph using information about hidden nodes of the graph (col. 9, lines 21-23, preliminary layout structure and col. 14, lines 47-48, an entry is created in the preliminary layout node array); determining positions of nodes on levels of the layout using information about hidden nodes of the graph (col. 7, lines 28-32, an invisible dependency is created in order to maintain the position relationship between nodes for layout); and determining coordinates of new nodes in the layout without using information about hidden nodes (figures 2A-2D, which Examiner interprets as allowing for the input of project data 200B, i.e. creating new nodes, and positioning nodes without using information about hidden nodes, figure 2C).

Regarding claim 2, Aamodt discloses inserting new levels of the layout between existing levels when a new level is needed to contain a new node, (figures 3E-3O).

Regarding claim 3, Aamodt discloses nodes on existing levels retain positions on the existing levels (col. 11, line 1, relative row position).

Regarding claim 4, Aamodt discloses the determining steps are performed to minimize visual changes in the layout as compared to an initial layout of the graph (figures 2B and 2C).

Regarding claim 5, Aamodt discloses complying with quality criteria (col. 11, lines 26-45, layout formatting including parameters, which Examiner interprets as quality criteria).

Regarding claim 6, Aamodt discloses the quality criteria comprise minimization of edge crossings of the layout (col. 2, line 66 - col. 3, line 8, reducing intersections of links between nodes, and col. 11, lines 26-45, layout parameters may specify a particular link style, which Examiner interprets as minimization of edge crossings).

Regarding claim 7, Aamodt discloses the quality criteria comprises minimization of back edges of the layout (col. 11, lines 26-45, spatial arrangement of nodes including top down from left, which Examiner interprets as minimizing back edges, in that the node hierarchy would generate the layout in a left to right manner).

Regarding claims 8-21, they are rejected based upon similar rational as claims 1-7.
